Peterson's Graduate Programs in Arts & Architecture 2011 Springer

Increasingly, modern medicine relies on so called traditional or ancient medical knowledge. Holistic practices such as adhering to proper diet, observing rules for appropriate behavior, and administering medical preparations are coupled with the latest technology and methods to treat the whole patient. In light of this trend, there is much to be gained from understanding of one of the oldest medical systems still in existence. Tibetan Medicinal Plants provides you a detailed analysis of how Tibetan plants are used in this centuries old system. The book opens with a summary of Tibetan medicine and covers the various habitats in which the plants are found. The main part of this volume encompasses 60 monographs listed by the Tibetan plant name. Each monograph consists of several chapters

addressing different topics related either to the Tibetan or the Western approach. Most of the monographs contain a description of the macroscopic and microscopic characteristics of the used plant parts, and anatomical features of 76 plants are provided. Each monograph presents an overview of the known chemical constituents and pharmacological properties of each plant and describes their use in Tibetan medicine. In contrast to other publications on Tibetan medicine, where translations of the Tibetan terms are given in other languages, this book treats the Tibetan word as a technical term, keeps the Tibetan term and explains its meaning, lessening confusion by reducing the number of translations. Traditional Tibetan medicine has been in existence for centuries. Curative practices existed in the prebuddistic era, and the art of healing developed more than 2500 years ago. *Tibetan Medicinal Plants* provides a comprehensive overview of all plant types, thus making it easier to grasp the Tibetan concept. It gives you a comprehensive look at this centuries old science.

Today's societies require research approaches that are creative, sensitive to cultural and contextual diversity, rooted in engagement and critical dispositions, and situated within local contexts. Action research and evaluation are inquiries into and about human lives. Both modes generate actionable data in specific contexts to facilitate positive social change and to further social justice. This book explores the potential of integrating action research and evaluation frameworks to encourage knowledge democracy, data literacy, and ethical practices. The authors draw a clear connection between program enactment and program goals, investigating the processes of design, qualitative and quantitative data collection, and analysis, and mixed methods considerations. Key questions include: why is new research paradigm needed? How do we define data literacy? How do we understand equitable societies? Working from the belief that knowledge is created constantly in our world by those in real-world settings and practical contexts, *Evaluation and Action Research* provides practitioners with an

accessible guide to better inform practice and decision making.

Very few studies have explored in detail the experiences of Chinese students at German universities, this study is an attempt to create a balance. The research

focuses on psychological and sociocultural adjustment experiences of Chinese students at a German university, i.e. Ludwig-Maximilians-Universität in Munich, and their situation after graduation. It reports quantitative and qualitative data and discusses practical implications of the findings. The study provides a starting point for all concerned to review and develop procedures and services which affect the experiences of Chinese students as well as other international students in Germany.
