This volume represents a painstaking and scholarly introduction to the management of children and adults who have problems of communication related to, or in addition to, mental disorder. It is a relatively unexplored field having received scant attention until recent years, but the quality of the work included here gives a clear

indication that the area should move from the periphery into a main stream position in the education and practice of speech therapists.

Although all students in training receive some teaching in the area of psychiatry it tends to be limited to a brief consideration of the role of the psychiatrist, and clinical psychologist - very rarely the speech therapist. It has been proposed that

the education of the speech therapist who intends to enter this difficult but rewarding field should be developed at post graduate level and there are strong arguments given in this volume to support the idea. Claims that the field is neglected during initial training are, however, well founded and this volume should alert those responsible for the education of speech therapists to this

deficiency.

This definitive and thought-provoking work will be compulsive reading for students, researchers and the interested general reader *Encyclopedia of Distance Learning, Second Edition* SAGE Publications This title is directed primarily

towards health care professionals outside of the United States. It is written specifically to meet the needs of nursing students undertaking the common foundation programme. It aims to explain how and why sensitive, holistic and evidence-based nursing care is carried out. common to all and specific to each branch. The book aims to provide all students on foundation nursing and health care programmes with material of sufficient depth/breadth to achieve the NMC outcomes required for entry into the branch programmes. There is an emphasis not only on the theory that underpins nursing practice in the common foundation programme but also on nursing skills

which form an increasingly emphasized part of the programme. The chapters have been reviewed by experts from each branch and also clinical skills to ensure the content reflects each branch accurately and appropriately. Emphasis on clinical skills & lifelong learning Realistic scenarios reinforce the need for patient/client-centred care with a holistic approach Activity boxes for all

branches and age groups in each chapter ensure relevance to nurses in diverse settings An integrated approach to health promotion with activity boxes emphasises that health maintenance and promotion are central to contemporary nursing practice Reflection, critical thinking and research/appraisal skills are encouraged with a problem centred approach that

will help to develop the skills needed to provide sensitive and effective, high quality care and to integrate theory with practice The emphasis on nursing/clinical skills underlines the importance of core skills - an integral part of the patient/client experience Cultural diversity is a core theme throughout The importance of evidence-based practice is highlighted and the text helps readers

are assisted to acquire the skills to provide evidence-based care A wide range of general and branch-specific interactive boxes help to develop an understanding of some issues in other branches as well as the core issues that affect all nurses. Self-test questions and answers provide an opportunity for readers to take responsibility for and check their learning. Valuable learning tools

are included: glossary of key terms, useful websites and references
